Problema curs 7

Olaru Gabriel Iulian - 324 CC -

1. n = 12 biti, tc = 1us
$$u_i(t) = 10\sqrt{2} + \sin(1500 \pi t)$$

a)
$$q = \frac{U_{imax}}{2^n}$$
, $U_{imax} = 10\sqrt{2} \Rightarrow q = \frac{10\sqrt{2}}{2^n} = \frac{5\sqrt{2}}{2^{11}}$

b)
$$f_{\lim \dot{c} = \frac{1}{2\pi^{2^n}t_c} = \frac{1}{2\pi^{2^1}10^{-6}} = \frac{10^6}{2^{13} \cdot \pi} \approx 39 \, \dot{c}}$$

c)
$$\omega = 1500 \pi = 2\pi f \Rightarrow f = 750 > f_{\lim i = 39 \Rightarrow i}$$

Deci se utilizeaza CE/R

$$i = C \cdot \frac{du_e}{dt} \Rightarrow C = 10 \, pA \cdot \frac{1}{5} \frac{mV}{s} = 2 \cdot 10^{-12} \cdot 10^3 = 2 \cdot 10^{-9} = 2 \, nF$$

a)
$$\epsilon_{\Delta td} = \pi f \Delta td \Rightarrow \epsilon_{\Delta td} = \pi \cdot \frac{v}{2\pi} \cdot \Delta td \Rightarrow \epsilon_{\Delta td} = \frac{1,5 \cdot 10^6 \cdot 10^{-8}}{2} \Rightarrow \epsilon_{\Delta td} = \frac{1,5}{2} \cdot 10^{-3} = 7,5 \cdot 10^{-3}$$

b)
$$\epsilon_r = \frac{\epsilon_{\Delta td}}{U_{max}} = \frac{7.5 \cdot 10^{-3}}{10} = 7.5 \cdot 10^{-4}$$

$$\frac{\Delta u_q}{U_{max}} = \frac{\Delta q}{C \cdot U_{max}} \Rightarrow \Delta u_q = \frac{\Delta q}{C}$$

$$\Delta u_q = \frac{20 \, p \cdot C}{30 \, nF} = \frac{2}{3} \cdot 10^{-12} \cdot 10^9 = \frac{2}{3} \cdot 10^{-3} = 0,66 \cdot 10^{-3}$$
